A QUICK INTRO

Started my professional carries in 2004 after gaining bachelor's degree in business. AFI a Mechanical Engineering Multinational firm where I started as junior project coordinator and with the time worked on positions like indoor service advisor, sales engineer and business development manager in Kuwait. Moving forward worked for a year plus in a logistics & warehousing well known company in Kuwait where I gained the wide knowledge in shipment handling and storage solutions. Later in 2011 moved to Bahrain and worked for a well known businessman in his new establishment related to security services and food products. Later the group took over few smart governmental projects where I played key role in mobilization and recruitment. Once again back in 2015 AFI hired me once again to undertake a challenging role in their biggest branch of Saudi Arabia. During this tenure my duties included the branch operations from Jubail till Ar'ar where the giant customers list fall like SABIC, MAADEN & ARAMCO. Day to day sales, shutdown jobs, turnkey projects and 24/7 services were the part of my operations handling. In 2017 established my own firm in Bahrain with a local partner where the company undertook fabrication, mechanical shutdown, construction civil and mechanical projects with the 2019 turnaround of 350K BD. The operations were shut in mid-2020 due to partnership dispute and COVID 19 crisis.
