about

I wish to express my interest to work as an Architect. I graduated from SRM school of Architecture (Chennai, India) in the year 2010. I have 8+ years experience working in an office environment and one year experience doing freelance. Working in different environments has given me different work exposures and I am confident with my skills, I will be an asset to your firm.

Throughout my experience as an architect, I was allowed to work in different projects and various types, some of which were new to me but with determination to learn and grow, the task was completed within the given time. The first project that I worked on, at Architecture Paradigm (Bangalore, India) where I worked for three years after I graduated, was the Centre of Indian music experience which was an interesting project, got to work from the design stage to construction phase which was very exciting for me to see it evolve, I got to work on many other project types while.

In my current position at EMGA Foreign Branch (2015 - to present), I was involved in designing the office headquarters for AXA insurance along with the fit-out from giving design options for planning and facade to submitting construction drawings as well as coordinating with the contractor on site. I was involved in various other typologies like designing institutions, a shopping mall with a residential tower, residential complex, promenade, fitness studio and various competition designs all of which I was involved from concept, design development, presentation drawing and preparing construction drawings, I was part of a design experimental team as well, I can work both independently and in a team, I enjoy my work and always ready to contribute to the growth of the company.

I am well versed with Autocad, Revit, Sketchup, Photoshop and have some exposure to Rhino.
